

SNS COLLEGE OF TECHNOLOGY

An Autonomous Institution

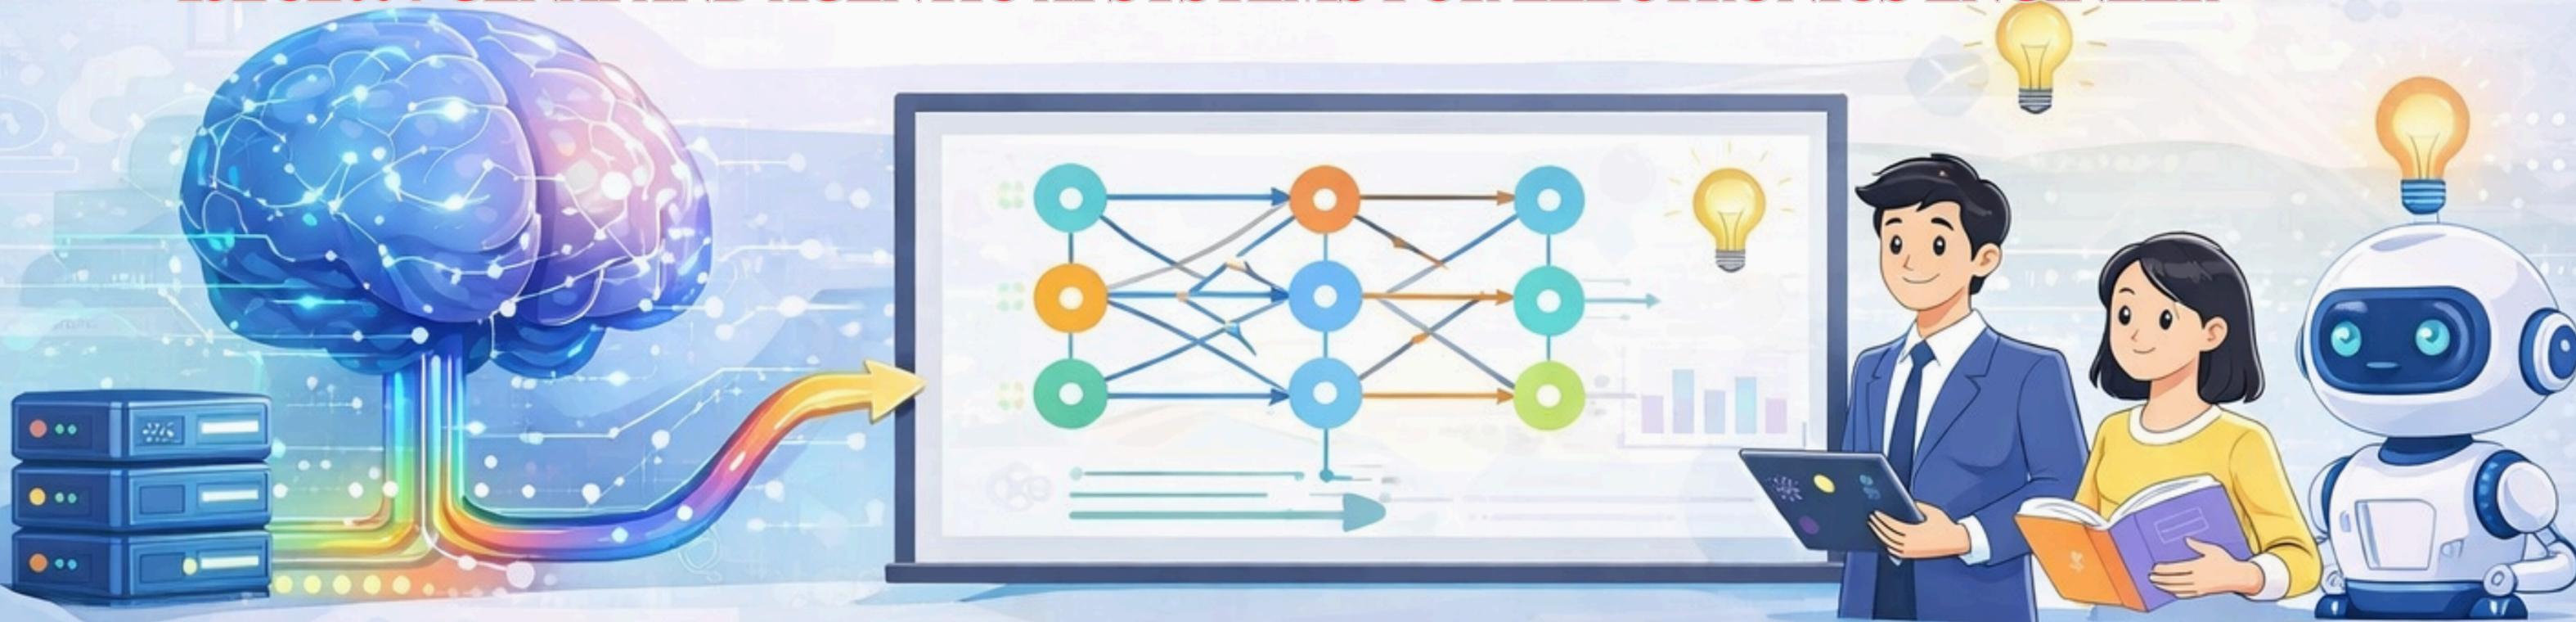

Coimbatore-35

Overview of Neural Networks

A Design Thinking Approach

23ECE604-GENAI AND AGENTIC AI SYSTEMS FOR ELECTRONICS ENGINEER

Empathize – Neural Networks

(Real-World Problems)

How can machines learn patterns like humans?

Define – Clearly Articulating the Problem

Problem Summary

Students struggle to improve in math because they lack personalized feedback and find practice problems unengaging.

- Who?** – Struggling Math Students
- What?** – Lack of personalized feedback
- Why?** – Unengaging Practice

How might we help them? !

How might we help them?

💡 IDEATE – Stage 3

Ideate – Solutions Using Neural Networks

How might we make computers learn and adapt like humans?

Learning Models

- Artificial Neural Network (ANN)
- Deep Neural Network (DNN)

Data Handling

Automatic feature learning

Backpropagation learning

Applications

Image classification

Speech recognition

Pattern recognition

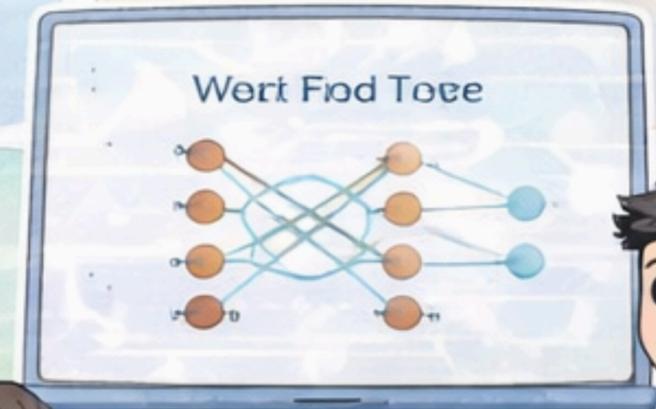

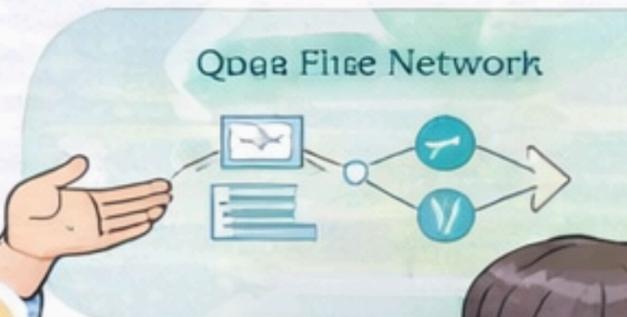

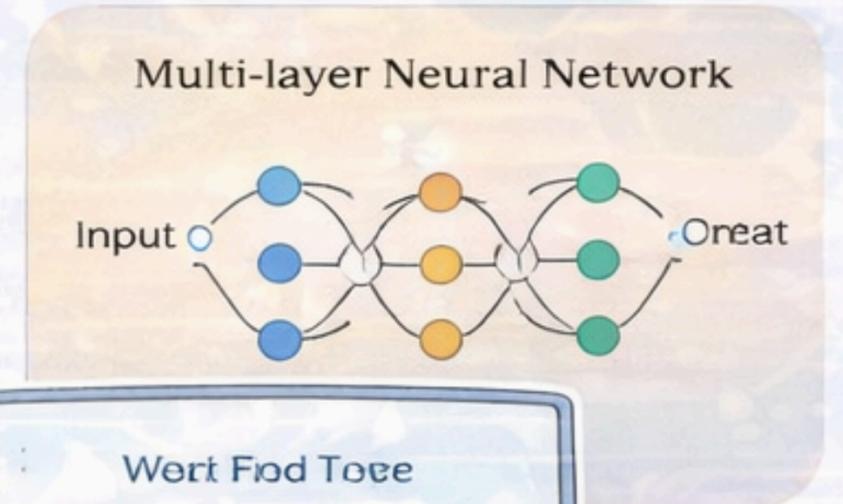

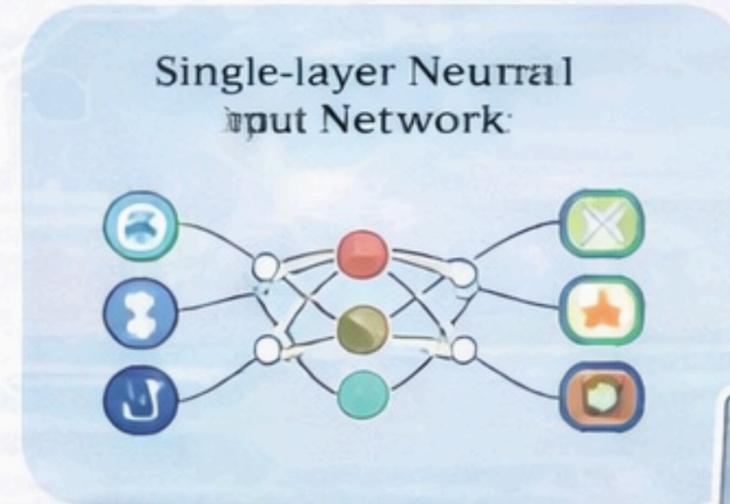

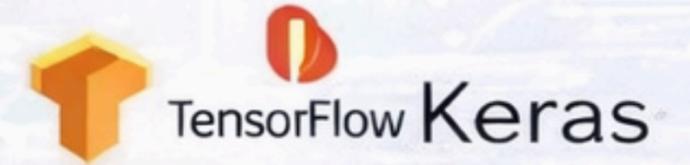

Many ideas – no judging

Prototype – Build Neural Network Models

Prototype approaches:

1. Single-layer Neural Network
2. Multi-layer Neural Network
3. Feedforward Neural Network
4. Simple ANN Trained on Sample Dataset

 Prototyping tools to train and test?

Test – Evaluate Neural Network Models

How do we measure success and improve our models?

Prototype approaches:

1. Single-layer Neural Network
2. Multi-layer Neural Network
3. Feedforward Neural Network
4. Simple ANN Trained on Sample Dataset

Single layer

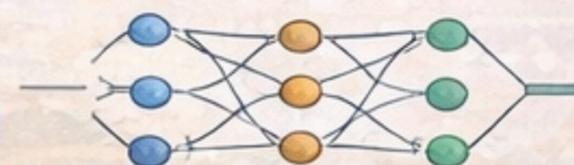

- Measure correct predictions
- Compare against test data

Precision

- Check false positives
- Increase specificity

Recall & Retrain

- Identify false negatives
- Increase sensitivity

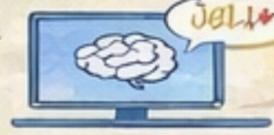

Test your model and refine it!

Neural Networks Mind Map

Empathize

- Computers fail to recognize images accurately
- Speech recognition errors

Define

- Traditional algorithms can't handle complex data
- Manual feature engineering reduces efficiency
- Need for self-learning systems

Define

- Artificial Neural Network
- Manual feature engineering
- Manual feature extraction is time-consuming

Ideate

- Artificial Neural Networks
- Automatic feature learning
- Increase sensitivity

Ideate

- Artificial Neural Networks
- Single & multi-layer models

Prototype

Test

- Measure accuracy, precision, recall
- Adjust and re-train the model

Applications of Neural Networks

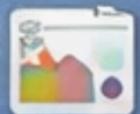

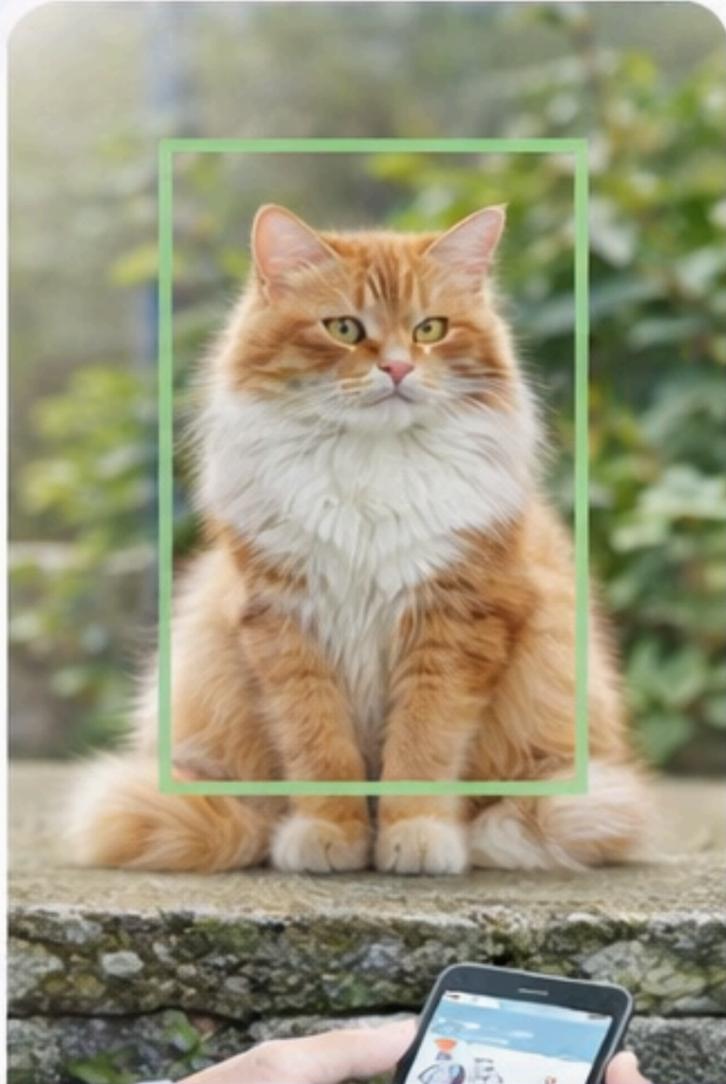

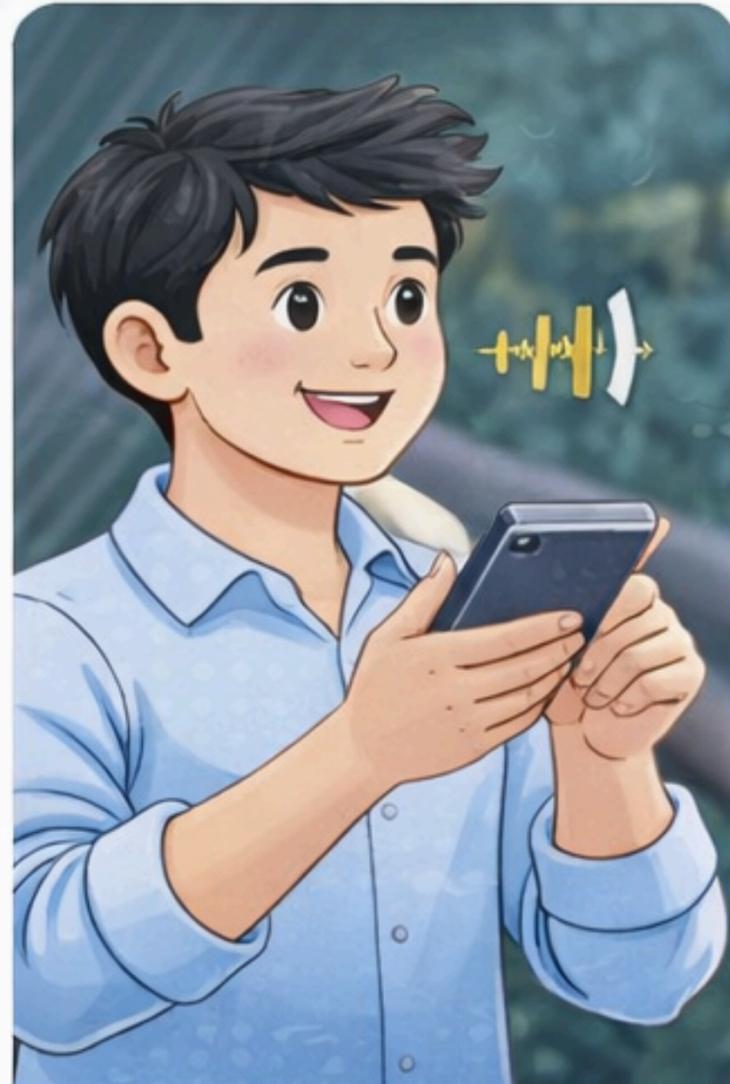

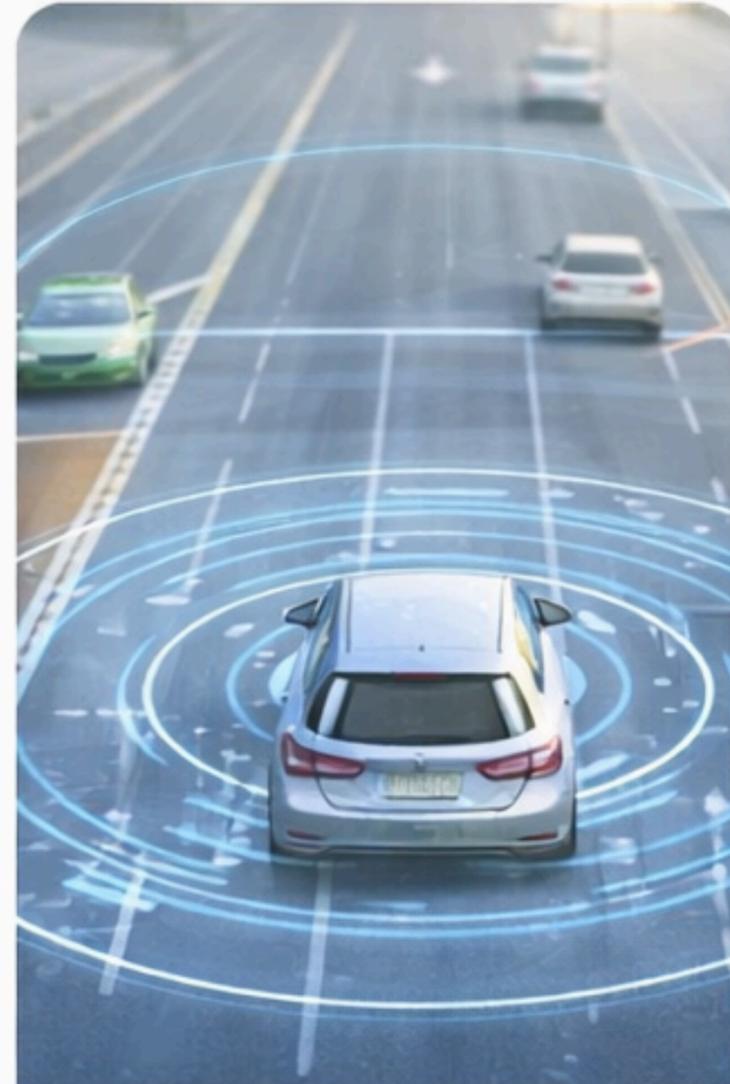

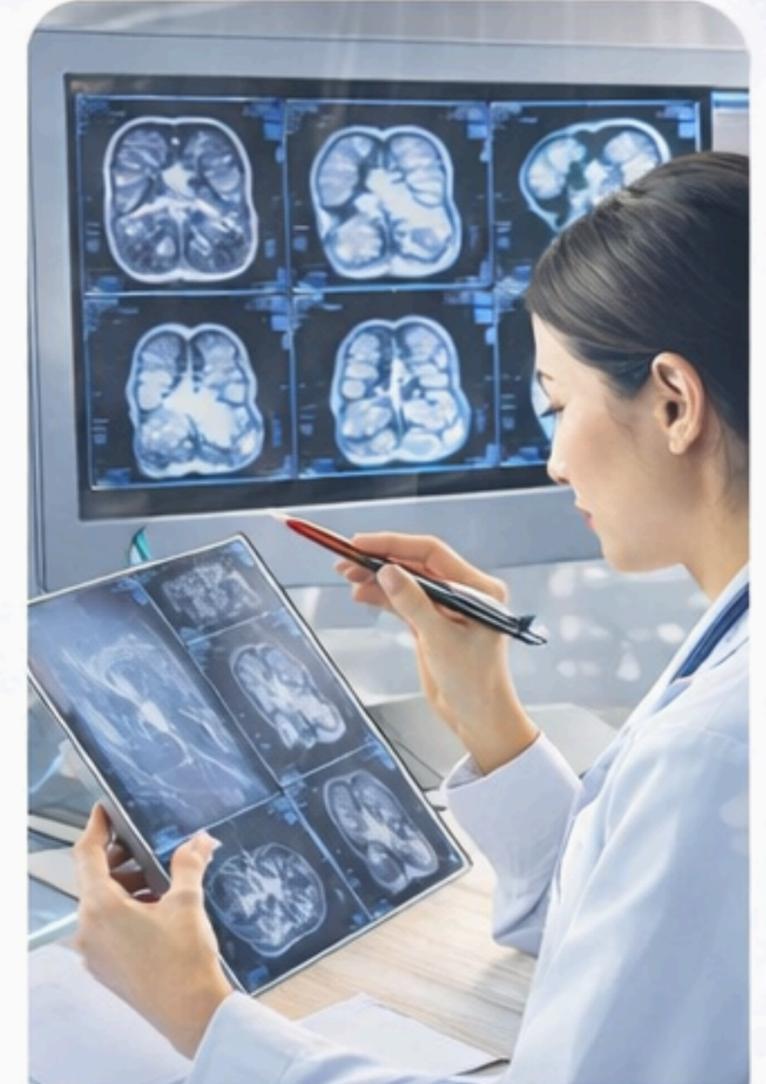

Image
Recognition

Speech
Recognition

Autonomous
Vehicles

Medical
Diagnosis

ADVANTAGES & LIMITATIONS

Advantages

- ✓ Efficient Data Representation
- ✓ Noise Reduction
- ✓ Feature Extraction
- ✓ Data Generation

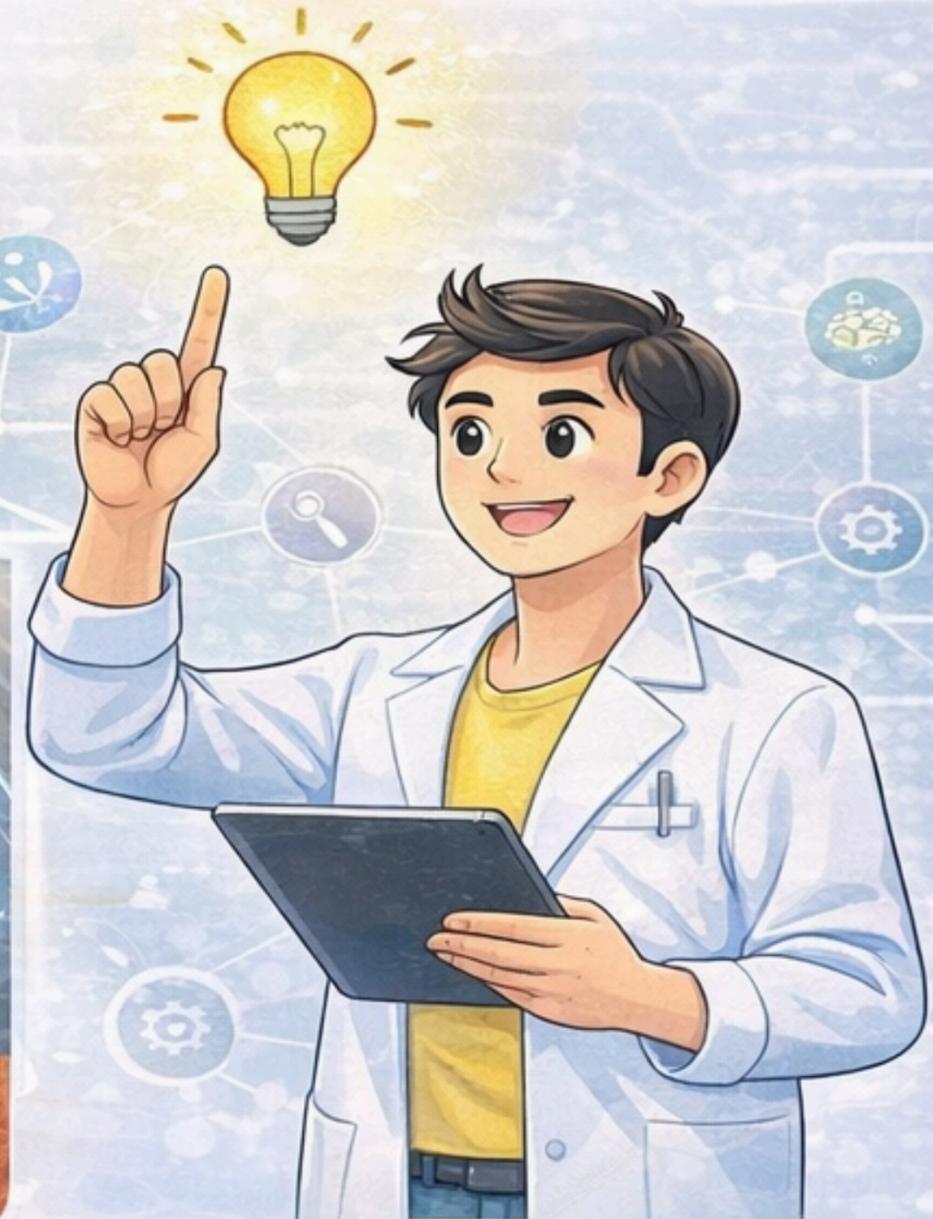

Limitations

- ✗ Training Challenges
- ✗ Overfitting Risk
- ✗ Limited Interpretability
- ✗ Computational Cost

CONCLUSION

- ✓ Neural networks mimic human intelligence
- ✓ From image recognition to medical diagnosis — they transform multiple industries
- ✓ Continued research will unlock new possibilities

-💡- What's next for the future of machine learning?
