

CLASS – VII

Puzzle

CHAPTER –7: Acids , Bases & salts

Complete the Puzzle

Across

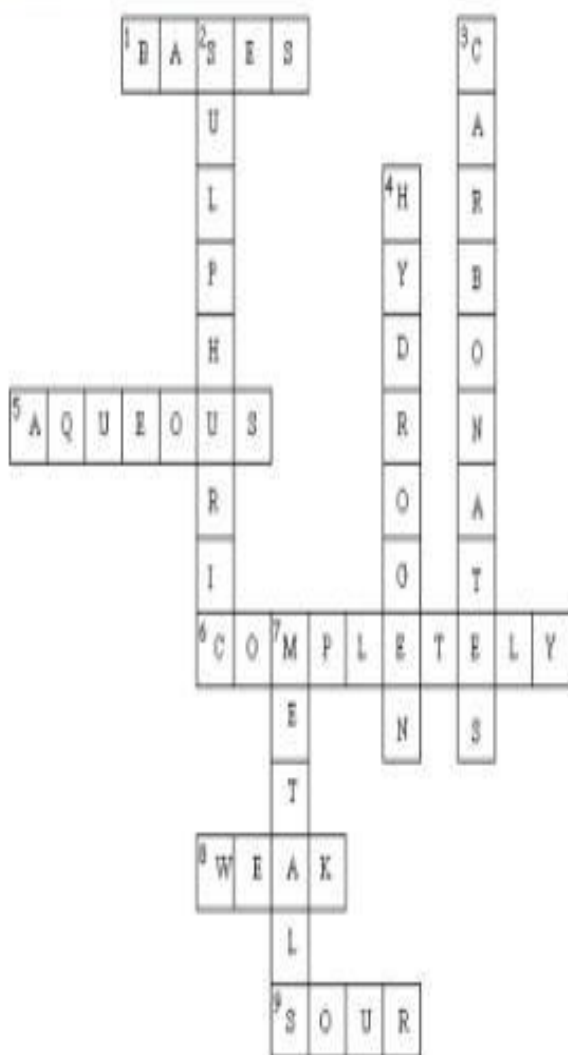

1. Acids react with _____ to give salt and water only.
5. Only _____ solution of acids have acidic properties.
6. In a strong acid, the acid molecules are _____ ionised.
8. Ethanoic acid is an example of a _____ acid.
9. Acids have a _____ taste.

Down

2. _____ acid is an example of a strong acid which is found in car battery.
3. _____ react with acids to give off a gas that forms a white precipitate with limewater.
4. When dissolved in water, acid molecules can ionise to give _____ ions.
7. Hydrogen gas is evolved when acids react with _____.

Answer

Across

1. Acids react with bases to give salt and water only.
5. Only aqueous solution of acids have acidic properties.
6. In a strong acid, the acid molecules are completely ionised.
8. Ethanoic acid is an example of a weak acid.
9. Acids have a sour taste.
