

Across

- 2.** Control center of the cell containing genetic material.
- 3.** Structure made of DNA that carries genetic information.
- 6.** Framework that provides shape and support to the cell.
- 7.** Site of protein synthesis in the cell.
- 8.** Organelle responsible for digestion and waste removal.

Down

- 1.** Structures involved in cell division.
- 4.** Small membrane-bound sac that transports substances.
- 5.** Network of membranes involved in protein and lipid synthesis.
- 10.** Fluid component of blood that carries cells and nutrients.
- 11.** Organelle that breaks down fatty acids and detoxifies.

Across

9. Organelle that modifies and packages proteins.

12. Barrier that regulates what enters and exits the cell.
