

### Across

5. Identical antibodies derived from a single immune cell clone
6. Molecule that blocks activity of enzymes involved in cell proliferation
8. Signaling molecule sometimes used to regulate growth of certain tissues
9. Plant derived agent that stabilizes microtubules preventing their disassembly
10. Selective estrogen modulator used to block hormone driven growth

### Down

1. Protein that can be engineered to bind specific cellular markers
2. Substance that kills cells by disrupting vital biological processes
3. Vinca alkaloid that halts cell division by disrupting microtubules
4. Tyrosine kinase inhibitor targeting abnormal signaling proteins
7. Anthracycline antibiotic that intercalates between DNA strands
