

Across

2. Class known for intercalating DNA and generating free radicals
3. Compound that stabilizes microtubules, preventing cell division
5. Folate antagonist that impedes nucleotide production
7. Plant-derived alkaloid that halts microtubule assembly
9. Metal-based drug that forms DNA cross-links, hindering tumor cells
10. Red anthracycline that intercalates DNA and produces reactive oxygen species

Down

1. Agent that mimics natural metabolites to block cell growth
4. Base component of DNA and RNA targeted by certain inhibitors
6. Square planar platinum compound causing DNA cross-links
8. DNA base that can be deaminated, also a target for analog drugs
