

# **SNS COLLEGE OF PHARMACY AND HEALTH SCIENCES**

*Affiliated To The Tamil Nadu Dr. MGR Medical University, Chennai*

*Approved by Pharmacy Council of India, New Delhi.*

**Coimbatore -641035**

**COURSE NAME : PHARMACOVIGILANCE (BP805ET)**

**VIII SEM / IV YEAR**

**TOPIC 1 : EDUCATION AND TRAINING PROGRAM**

# Empathize

Services to nursing homes/clinics

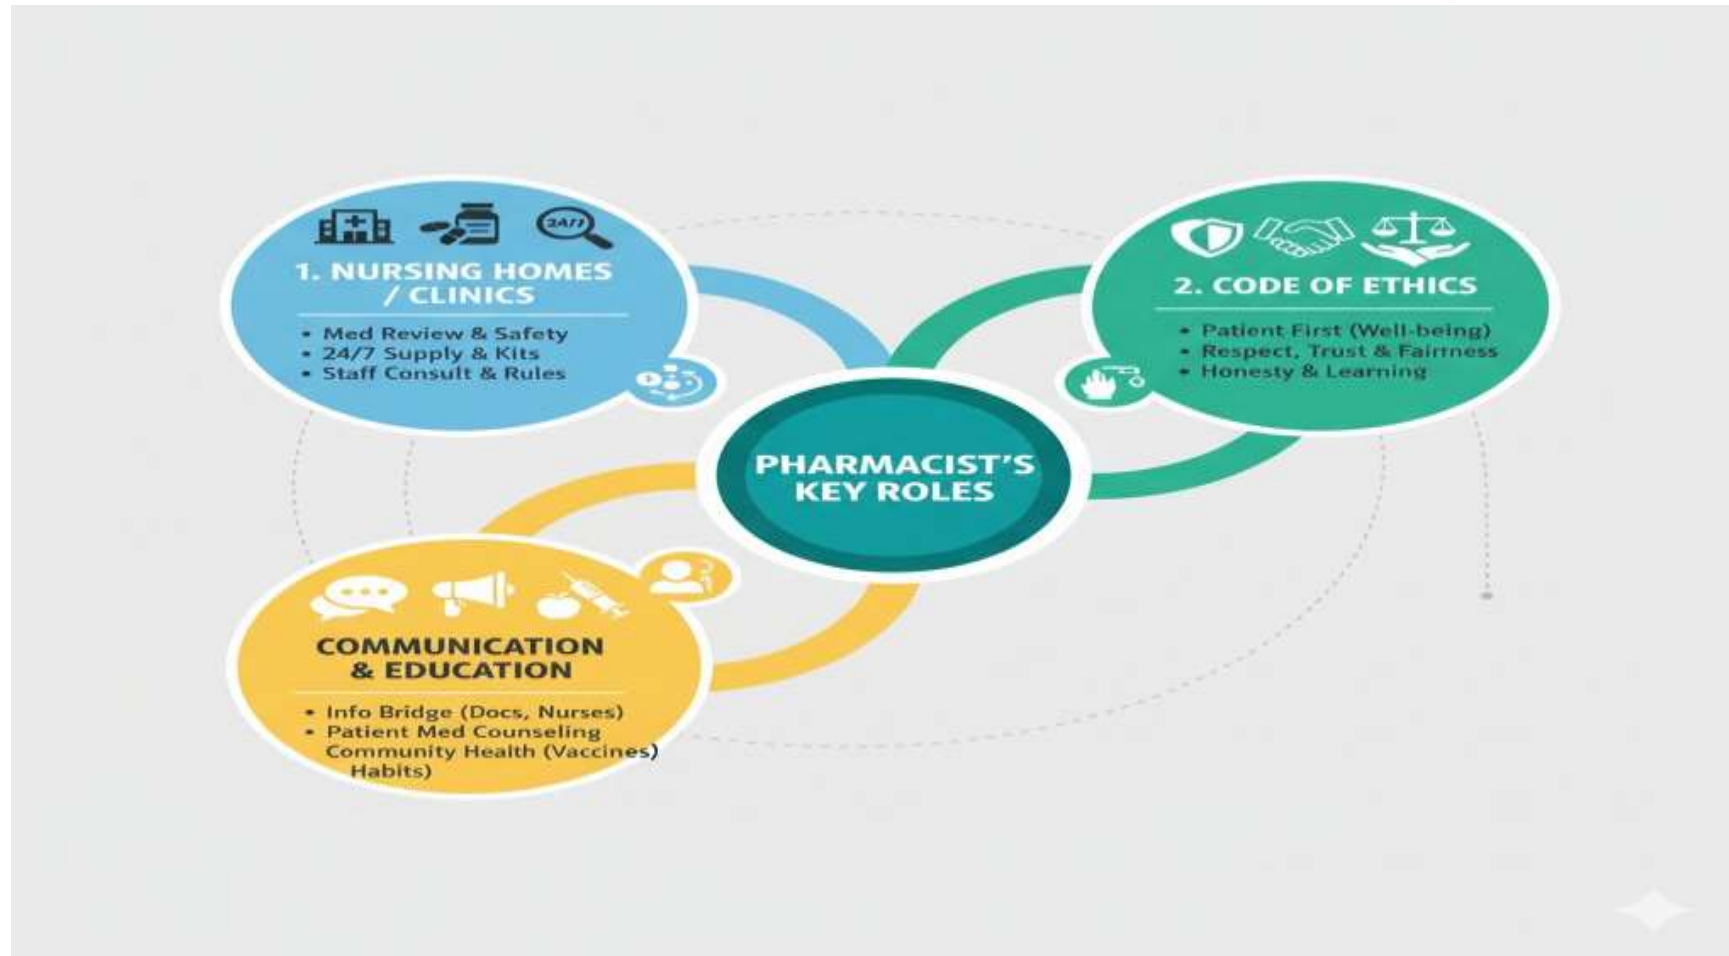

Understand the needs of nurses, doctors, and patients

Observe how medicines are stored, dispensed, and used

Identify problems like delays or wrong medication handling

# MINDMAP

Empathize

# INTRODUCTION

## Empathize: Understanding People Behind the Process

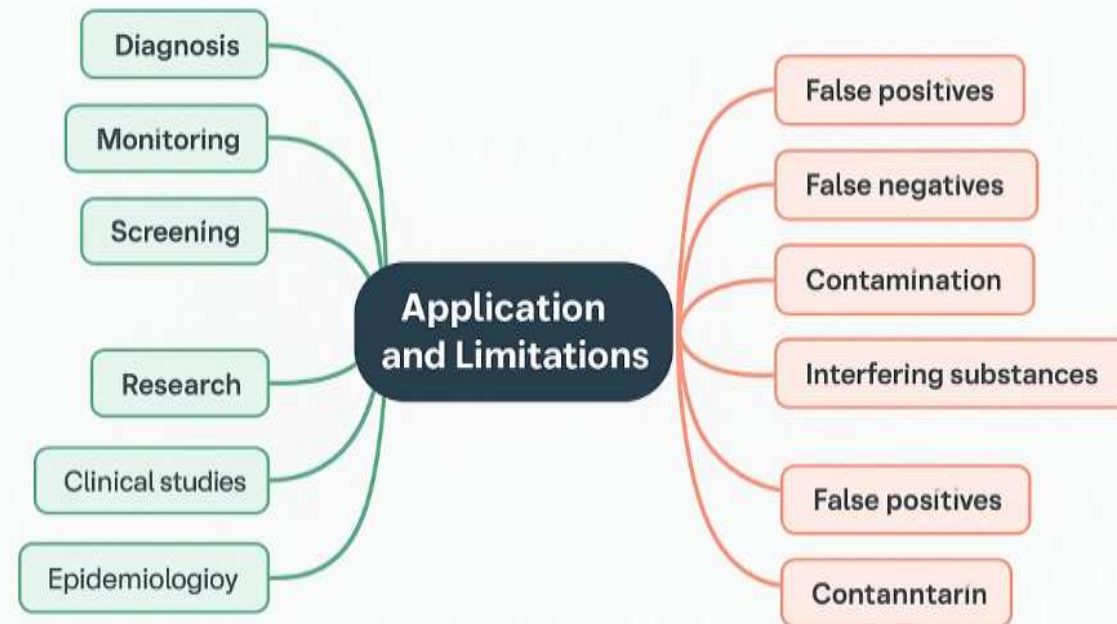

- Observe, listen, and engage with patients, staff, and community
- Identify pain points and unmet needs in pharmacy services

### Examples

- **Services to Nursing Homes/Clinics:** Staff struggle with medication logistics and safety
- **Code of Ethics:** Ethical dilemmas arise around patient safety and controlled drugs
- **Communication/Education:** Patients lack clarity about proper medicine use

## Key Purposes of Blood Analysis

Diagnosis and Treatment Monitoring

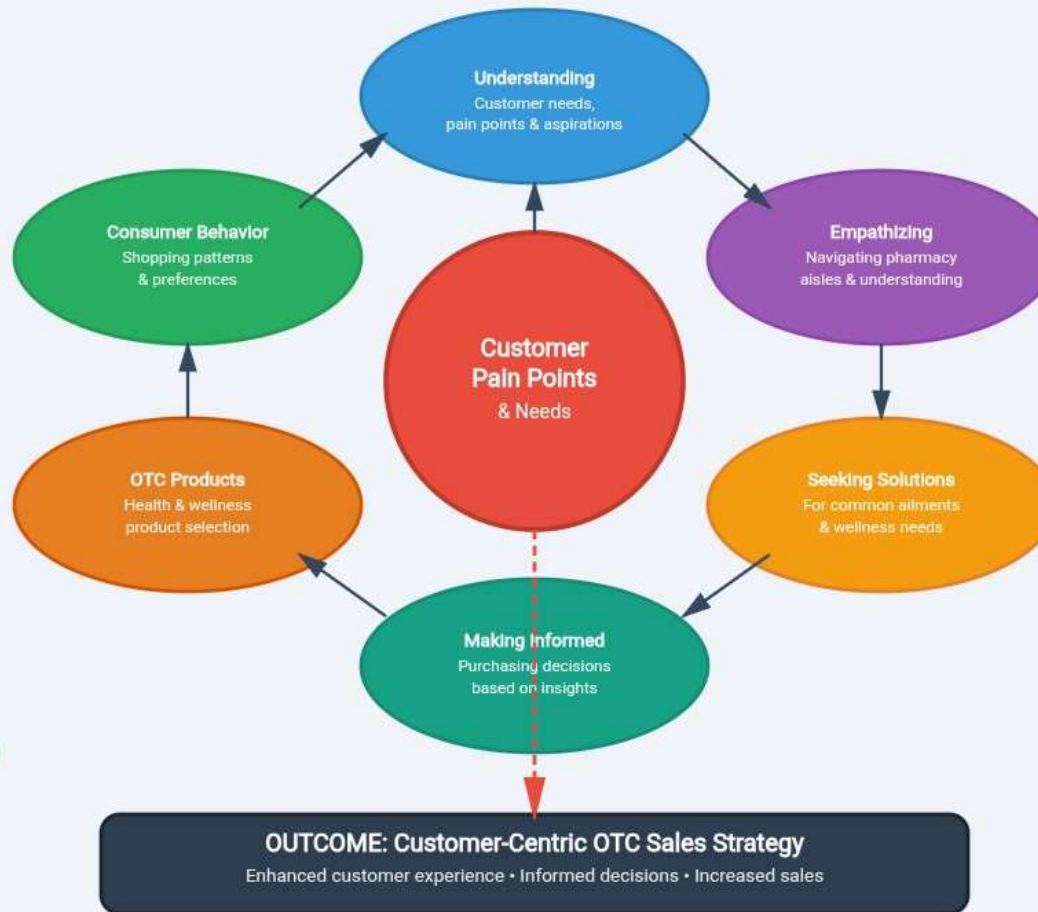

# SUMMARY

## Ideate: Consumer Pain Points and OTC Solutions

Design Thinking Approach for OTC Sales Strategy

## CLASS ASSESSMENTS

1. A patient with the HLA-B\*57:01 allele is prescribed abacavir. What is the most appropriate action to prevent a severe adverse drug reaction?
- a. Proceed with standard dosing and monitor liver enzymes
  - b. Avoid abacavir and select an alternative antiretroviral
  - c. Reduce abacavir dose by 50%
  - d. Add corticosteroid prophylaxis before starting abacavir

**A.** A. Proceed with standard dosing and monitor liver enzymes

**B.** B. Avoid abacavir and select an alternative antiretroviral

**C.** C. Reduce abacavir dose by 50%

**D.** D. Add corticosteroid prednisolone before starting abacavir

## CLASS ASSESSMENTS

**Which genotype is most associated with life-threatening skin reactions (e.g., Stevens–Johnson syndrome) when exposed to carbamazepine in certain Asian populations?**

- a. TPMT poor metabolizer
- b. HLA-B\*15:02 positive
- c. CYP2D6 ultrarapid metabolizer
- d. VKORC1 -1639G→A variant

## Genotypes & Skin Reactions: Exploring Carbamazepine Risk

Based on risk of Stevens-Johnson Syndrome in Asian Populations

A.

TPMT Poor  
Metabolizer

B.

HLA-B\*15:02  
Positive

C.

CYP206 Ultrapid  
Metabolizer

D.

D. VKORC1 -1639G→A  
Variant

## CLASS ASSESSMENTS

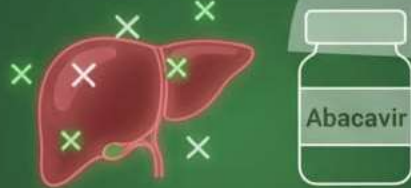

**A patient with reduced TPMT and NUDT15 activity is starting thiopurine therapy (e.g., mercaptopurine). What adverse reaction risk is increased and how should therapy be adjusted?**

- a. Increased hepatotoxicity; switch to abacavir
- b. Increased myelosuppression; consider profound dose reduction or alternative therapy
- c. Increased nephrotoxicity; add dose-dependent hydration
- d. Increased cardiotoxicity; monitor with baseline echocardiogram

**A.**

An illustration of a liver with several 'X' marks indicating damage, and a bottle of Abacavir.

**A. Increased Hepatotoxicity:**  
Switch to Abacavir

**B.**

An illustration of a bone marrow section with a large red 'X' over it, and a blood bag with a skull and crossbones.

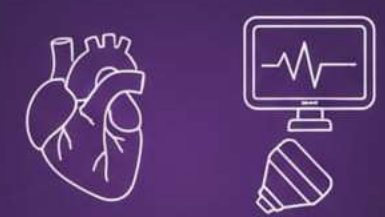

**B. Increased Myelosuppression:**  
Consider Profound D.Reduction or  
or Alternative Therapy

**C.**

An illustration of a kidney with water droplets, and a hydration bag.

**C. Increased Nephtotoxcity:**  
Add Dose-Dependent Hydration

**D.**

An illustration of a heart and an ECG monitor.

**D. Increased Cardiototoxicity:**  
Monitor with Baseline Echoodogram
