## An Autonomous Institution Coimbatore-35

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A++' Grade Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

# DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING

19GET276 – VQAR II

II YEAR/ IV SEMESTER

UNIT 1 – QUANTITATIVE ABILITY III

TOPIC - AVERAGE SPEED, RELATIVE SPEED, TRAINS

- Time taken by a train of length / metres to pass a pole or standing man or a signal post is equal to the time taken by the train to cover / metres.
- Time taken by a train of length / metres to pass a stationery object of length b metres is the time taken by the train to cover (/ + b) metres.
- Suppose two trains or two objects bodies are moving in the same direction at u m/s and v m/s, where u > v, then their relative speed is = (u v) m/s.
- Suppose two trains or two objects bodies are moving in opposite directions at u m/s and v m/s, then their relative speed is = (u + v) m/s.
- . If two trains of length a metres and b metres are moving in opposite directions at u m/s and v m/s, then:
- The time taken by the trains to cross each other =  $\frac{(a+b)}{(u+v)}$  sec.
- . If two trains of length a metres and b metres are moving in the same direction at u m/s and v m/s, then:
- The time taken by the faster train to cross the slower train =  $\frac{(a+b)}{(u-v)}$  sec.

- A train running at the speed of 60 km/hr crosses a pole in 9 seconds. What is the length of the train?
  - A. 120 metres
  - B. 180 metres
  - C. 324 metres
  - D. 150 metres

Answer: Option D

### Explanation:

Speed = 
$$\left(60 \times \frac{5}{18}\right)$$
 m/sec =  $\left(\frac{50}{3}\right)$  m/sec.

Length of the train = (Speed x Time).

$$\therefore$$
 Length of the train =  $\left(\frac{50}{3} \times 9\right)$ m = 150 m.

- A train 125 m long passes a man, running at 5 km/hr in the same direction in which the train is going, in 10 seconds.
  The speed of the train is:
  - A. 45 km/hr
  - B. 50 km/hr
  - C. 54 km/hr
  - D. 55 km/hr

Answer: Option B

#### Explanation:

Speed of the train relative to man =  $\left(\frac{125}{10}\right)$  m/sec

$$=\left(\frac{25}{2}\right)$$
m/sec.

$$= \left(\frac{25}{2} \times \frac{18}{5}\right) \text{km/hr}$$

= 45 km/hr.

Let the speed of the train be x km/hr. Then, relative speed = (x - 5) km/hr.

$$x - 5 = 45 \implies x = 50 \text{ km/hr}$$

- 3. The length of the bridge, which a train 130 metres long and travelling at 45 km/hr can cross in 30 seconds, is:
  - A. 200 m
  - B. 225 m
  - C. 245 m
  - D. 250 m

Answer: Option C

#### Explanation:

Speed = 
$$\left(45 \times \frac{5}{18}\right)$$
 m/sec =  $\left(\frac{25}{2}\right)$  m/sec.

Time = 30 sec.

Let the length of bridge be x metres.

Then, 
$$\frac{130 + x}{30} = \frac{25}{2}$$

$$\Rightarrow 2(130 + x) = 750$$

$$\Rightarrow x = 245 \text{ m}.$$

- 4. Two trains running in opposite directions cross a man standing on the platform in 27 seconds and 17 seconds respectively and they cross each other in 23 seconds. The ratio of their speeds is:
  - A. 1:3
  - B. 3:2
  - C. 3:4
  - D. None of these

Answer: Option B

#### Explanation:

Let the speeds of the two trains be x m/sec and y m/sec respectively.

Then, length of the first train = 27x metres,

and length of the second train = 17y metres.

$$\therefore \frac{27x + 17y}{x + y} = 23$$

$$\Rightarrow$$
 27x + 17y = 23x + 23y

$$\Rightarrow 4x = 6y$$

$$\Rightarrow \frac{x}{y} = \frac{3}{2}$$

- 5. A train passes a station platform in 36 seconds and a man standing on the platform in 20 seconds. If the speed of the train is 54 km/hr, what is the length of the platform?
  - A. 120 m
  - B. 240 m
  - C. 300 m
  - D. None of these

Answer: Option B

#### Explanation:

Speed = 
$$\left(54 \times \frac{5}{18}\right)$$
 m/sec = 15 m/sec.

Length of the train =  $(15 \times 20)$ m = 300 m.

Let the length of the platform be x metres.

Then, 
$$\frac{x + 300}{36} = 15$$

$$\Rightarrow x + 300 = 540$$

$$\Rightarrow x = 240 \text{ m}.$$

- A train 240 m long passes a pole in 24 seconds. How long will it take to pass a platform 650 m long?
  - A. 65 sec
  - B. 89 sec
  - C. 100 sec
  - D. 150 sec

Answer: Option B

## Explanation:

Speed = 
$$\left(\frac{240}{24}\right)$$
 m/sec = 10 m/sec.

$$\therefore \text{ Required time} = \left(\frac{240 + 650}{10}\right) \text{sec} = 89 \text{ sec.}$$

- 7. Two trains of equal length are running on parallel lines in the same direction at 46 km/hr and 36 km/hr. The faster train passes the slower train in 36 seconds. The length of each train is:
  - A. 50 m
  - B. 72 m
  - C. 80 m
  - D. 82 m

Answer: Option A

#### Explanation:

Let the length of each train be x metres.

Then, distance covered = 2x metres.

Relative speed = (46 - 36) km/hr

$$=$$
  $\left(10 \times \frac{5}{18}\right)$  m/sec

$$=\left(\frac{25}{9}\right)$$
m/sec

$$\therefore \frac{2x}{36} = \frac{25}{9}$$

$$\Rightarrow 2x = 100$$

$$\Rightarrow x = 50.$$

- 8. A train 360 m long is running at a speed of 45 km/hr. In what time will it pass a bridge 140 m long?
  - A. 40 sec
  - B. 42 sec
  - C. 45 sec
  - D. 48 sec

#### Answer: Option A

#### Explanation:

Formula for converting from km/hr to m/s:  $X \text{ km/hr} = \left(X \times \frac{5}{18}\right) \text{m/s}$ .

Therefore, Speed =  $\left(45 \times \frac{5}{18}\right)$  m/sec =  $\frac{25}{2}$  m/sec.

Total distance to be covered = (360 + 140) m = 500 m.

Formula for finding Time = (Distance Speed)

∴ Required time =  $\left(\frac{500 \times 2}{25}\right)$  sec = 40 sec.

- Two trains are moving in opposite directions @ 60 km/hr and 90 km/hr. Their lengths are 1.10 km and 0.9 km respectively. The time taken by the slower train to cross the faster train in seconds is:
  - A. 36
  - B. 45
  - C. 48
  - D. 49

Answer: Option C

#### Explanation:

Relative speed = (60+ 90) km/hr

$$= \left(150 \times \frac{5}{18}\right) \text{m/sec}$$

$$=\left(\frac{125}{3}\right)$$
m/sec.

Distance covered = (1.10 + 0.9) km = 2 km = 2000 m.

Required time = 
$$\left(2000 \times \frac{3}{125}\right)$$
 sec = 48 sec.

- 10. A jogger running at 9 kmph alongside a railway track in 240 metres ahead of the engine of a 120 metres long train running at 45 kmph in the same direction. In how much time will the train pass the jogger?
  - A. 3.6 sec
  - B. 18 sec
  - C. 36 sec
  - D. 72 sec

Answer: Option C

#### Explanation:

Speed of train relative to jogger = (45 - 9) km/hr = 36 km/hr.

$$= \left(36 \times \frac{5}{18}\right) \text{m/sec}$$

= 10 m/sec.

Distance to be covered = (240 + 120) m = 360 m.

$$\therefore$$
 Time taken =  $\left(\frac{360}{10}\right)$  sec = 36 sec.

- 11. A 270 metres long train running at the speed of 120 kmph crosses another train running in opposite direction at the speed of 80 kmph in 9 seconds. What is the length of the other train?
  - A. 230 m
  - B. 240 m
  - C. 260 m
  - 320 m
  - None of these

Answer: Option A

#### Explanation:

Relative speed = (120 + 80) km/hr

$$= \left(200 \times \frac{5}{18}\right) \text{m/sec}$$
$$= \left(500\right) \text{m/sec}$$

$$=\left(\frac{500}{9}\right)$$
m/sec.

Let the length of the other train be x metres.

Then, 
$$\frac{x + 270}{9} = \frac{500}{9}$$

$$\Rightarrow x + 270 = 500$$

$$\Rightarrow x = 230.$$

- 12. A goods train runs at the speed of 72 kmph and crosses a 250 m long platform in 26 seconds. What is the length of the goods train?
  - A. 230 m
  - B. 240 m
  - C. 260 m
  - D. 270 m

Answer: Option D

#### Explanation:

Speed = 
$$\left(72 \times \frac{5}{18}\right)$$
 m/sec = 20 m/sec.

Time = 26 sec.

Let the length of the train be x metres.

Then, 
$$\frac{x + 250}{26} = 20$$

$$\Rightarrow x + 250 = 520$$

$$\Rightarrow x = 270.$$

- 13. Two trains, each 100 m long, moving in opposite directions, cross each other in 8 seconds. If one is moving twice as fast the other, then the speed of the faster train is:
  - A. 30 km/hr
  - B. 45 km/hr
  - 60 km/hr
  - D. 75 km/hr

Answer: Option C

#### Explanation:

Let the speed of the slower train be x m/sec.

Then, speed of the faster train = 2x m/sec.

Relative speed = (x + 2x) m/sec = 3x m/sec.

$$\therefore \frac{(100 + 100)}{8} = 3x$$

$$\Rightarrow 24x = 200$$

$$\Rightarrow x = \frac{25}{3}$$
.

So, speed of the faster train =  $\frac{50}{3}$ m/sec

$$= \left(\frac{50}{3} \times \frac{18}{5}\right) \text{km/hr}$$

= 60 km/hr.

- 14. Two trains 140 m and 160 m long run at the speed of 60 km/hr and 40 km/hr respectively in opposite directions on parallel tracks. The time (in seconds) which they take to cross each other, is:
  - A. 9
  - B. 9.6
  - C. 10
  - D. 10.8

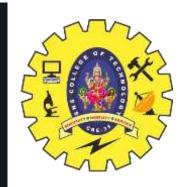

Answer: Option D

#### Explanation:

Relative speed = (60 + 40) km/hr =  $\left(100 \times \frac{5}{18}\right)$  m/sec =  $\left(\frac{250}{9}\right)$  m/sec.

Distance covered in crossing each other = (140 + 160) m = 300 m.

Required time = 
$$\left(300 \times \frac{9}{250}\right)$$
 sec =  $\frac{54}{5}$  sec = 10.8 sec.

- 15. A train 110 metres long is running with a speed of 60 kmph. In what time will it pass a man who is running at 6 kmph in the direction opposite to that in which the train is going?
  - A. 5 sec
  - 6 sec
  - C. 7 sec
  - D. 10 sec

Answer: Option B

#### Explanation:

Speed of train relative to man = (60 + 6) km/hr = 66 km/hr.

$$= \left(66 \times \frac{5}{18}\right) \text{m/sec}$$

$$=\left(\frac{55}{3}\right)$$
m/sec

... Time taken to pass the man = 
$$\left(110 \times \frac{3}{55}\right)$$
 sec = 6 sec.

# THANK YOU
