UNIT-IV FOURIER SERIES AND FOURIER TRANSFORM

FOURIER SERIES- PROBLEMS ON (0,2π)

Periodic junction: A junction find is said to be periodic with Period (p), g for all x, f(x+p) = f(x)where p is a possifive constant, the leastvalue of Pro which is called the period of f(x). E9: $f(x) = Sin x = Sin(x+a\pi) = Sin(x+a\pi) = \dots$ So, fin x is a period of $a\pi$

Distichlet'à condition:

Any Subtlen fix can be developed as fourder series $\begin{bmatrix} a_0 + \frac{8}{2} \\ \frac{2}{n-1} \end{bmatrix} \begin{bmatrix} a_n \cos nx + b_n \cos nx \end{bmatrix}$ where a_0, a_n and b_n are constants, provided. i) fix is porticatic, single valued and finite. ii) fix has a finite n_2 of finite ellowert inuities

and no infinite discontinuity, iii). for has almost a finite number of marina and nturima.

Founder sources :

A function f(x) is possible and satisfies proposed to the former it can be represented by an infrite series is called the former series as $f(x) = \frac{a_0}{2} + \frac{2}{n=1} [a_n \cos nx + b_n \sin n_2 c]^2$ where a_0 , an and b_n are forming coefficients.
