MCA- Internal Assessment –II (May2024)

Academic Year 2023-2024(Even) / Second Semester

**23CAT606 – Java Programming**

**Time: 1<sup>1/2</sup> Hours**

**Maximum Marks: 50**

**Answer All Questions**

**PART - A (5 x 2 = 10 Marks)**

- |                                                                                                                               | CO  | BL  |
|-------------------------------------------------------------------------------------------------------------------------------|-----|-----|
| 1 “Import statement is not essential in java.” True/False. Justify                                                            | CO2 | Eva |
| 2 How does the garbage collector in Java determine that an object is no longer reachable and eligible for garbage collection? | CO2 | Ana |
| 3 Why synchronization is required in thread?                                                                                  | CO3 | Eva |
| 4 Differentiate TCP with UDP.                                                                                                 | CO3 | Ana |
| 5 Examine two main methods of Servlet.                                                                                        | CO3 | Ana |

**PART - B (2 x 13 = 26, 1x 14=14Marks)**

- |                                                                                                                                                                                                                          |     |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|
| 6 (a) Identify potential memory leaks or inefficient memory usage patterns that contribute to excessive garbage collection activity.                                                                                     | CO2 | Und |
| (b) Categorize the I/O packages and its use case.                                                                                                                                                                        | CO3 | Und |
| 7 (a) Construct four JDBC drivers according to their distinct characteristics with neat diagram<br>(Or)                                                                                                                  | CO3 | Ana |
| (b) Experiment how session data is managed in the web application using HttpSession objects.                                                                                                                             | CO3 | Ana |
| 8 (a) Design user login window with event handling using ActionListener interface<br>(Or)                                                                                                                                | CO2 | App |
| (b) Develop a simple chat application using Java sockets. The application should support multiple clients communicating with a server. The server will broadcast messages from one client to all other connected clients | CO3 | App |
